

Final Proposals: Sarah Allen and R. Rob Cesnik

green infrastructure

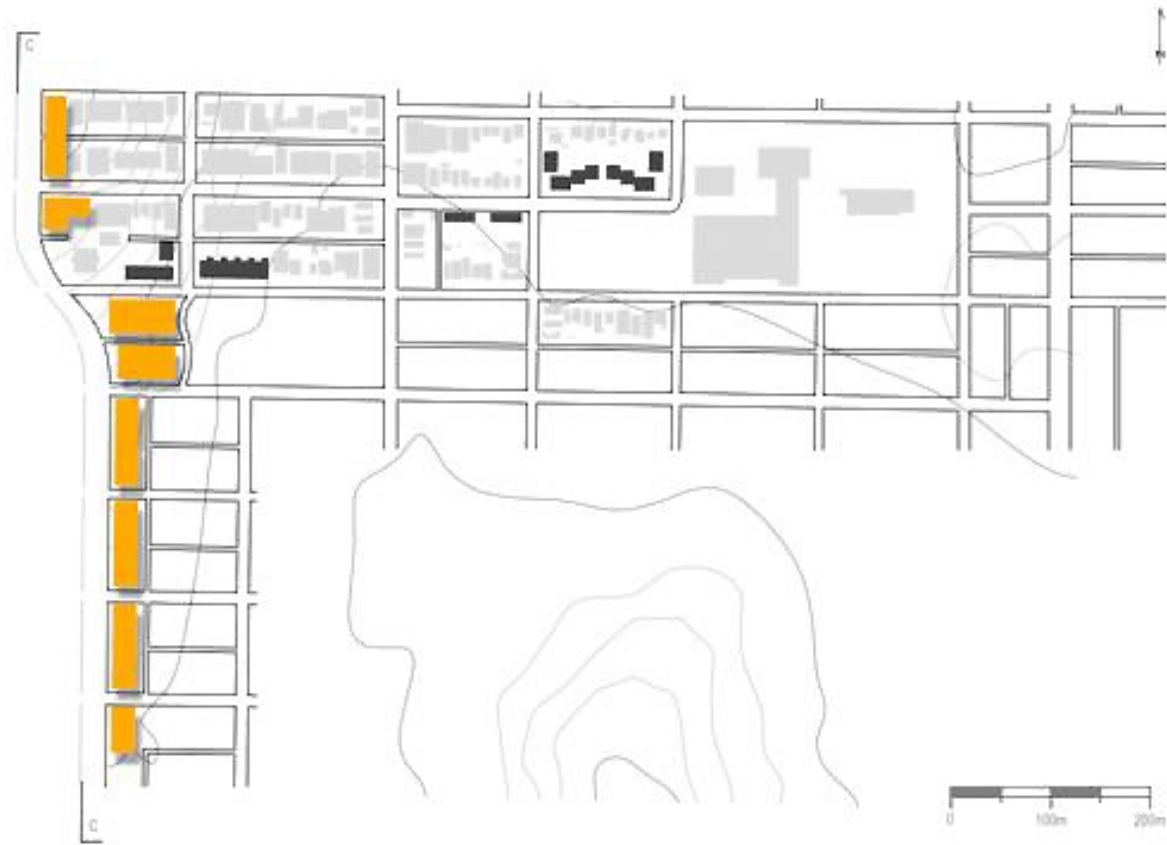

High density/commercial - these four-story residences with commercial space on the ground floor will occur along Commercial Drive and begin to bleed into Venables St. This style of housing will also occur within the industrial district to maintain the diversity of the area by introducing the existing infrastructure along Commercial Drive. High density - these four story buildings will have a double loaded corridor with ground floor walk in units. This style of housing will occur surrounding the grey water infiltration ponds.

Medium density – these two story town homes will occur, mainly behind the high density residential/commercial buildings, along Commercial Drive and may be found dispersed throughout the community. Single family dwellings – this style of housing will be pushed farther from the central node, high and medium density will be found in its place, which will allow for double residency to occur on the property.

**densification**

Final Proposals: Sarah Allen and R. Rob Cesnik

densification
